Application Deployment

## PERSONAL PROJECTS

### Ijarabiznes — Leasing Management Platform (02/2025 - 10/2025)

- Designed and developed a leasing management web application from scratch to automate rental operations and financial tracking.
- Implemented customer, inventory, order, and payment management with installment-based calculations.
- Built complex business logic for rental charges, debts, discounts, and transaction history.
- Integrated external payment systems including Payme for automated transaction processing and payment verification.
- Implemented reporting features for daily, monthly, and annual income and debt analytics.
- Previously deployed in production environment; currently maintained as a local demo project.

### Qarz Daftar — Peer Loan Tracking Application (01/2026 - Present)

- Developing a loan and debt tracking platform enabling users to manage mutual financial transactions.
- Implementing phone-based authentication and user search functionality.
- Designed transaction confirmation workflows and pending transactions for unregistered users.
- Building chat-based interaction with categorized folders and transaction attachments.
- Focused on scalable backend architecture and secure API design using modern backend practices.
